

DEPLOYMENT — ServiceManager.AI

1. Current Dev Environment

- WSL Ubuntu
 - Docker Compose
 - Postgres container
 - NestJS container
-

2. Production Architecture (Target)

- VPS or Cloud VM
 - Docker Compose OR Kubernetes
 - Reverse proxy (Nginx)
 - HTTPS (Let's Encrypt)
 - Separate Postgres instance
 - Daily backups
-

3. Environment Variables (Production)

Required: - DATABASE_URL - JWT_SECRET - NODE_ENV=production

Optional: - RATE_LIMIT_CONFIG - LOG_LEVEL

4. Scaling Plan

Stage 1: Single server + Docker

Stage 2: Separate DB server

Stage 3: Horizontal scaling backend Load balancer Redis for caching

5. Monitoring

Future: - Prometheus - Grafana - Log aggregation - Error tracking (Sentry)

6. Backups

Daily: pg_dump

Weekly: Full DB snapshot

Store backups outside main server.
